

SMART METERS

[Free Smart Meter Roll-out](#) Smart meters are the new generation of gas and electricity meters. They are being installed in homes across the UK at no extra cost, to replace the traditional meters, including prepay key meters.

Smart Meter Box and in-house display

[What do Smart Meters do?](#) A smart meter sends automatic meter readings directly and securely to your energy supplier, resulting in accurate bills, an end to estimates and manual meter readings. The accompanying in-home display is a handheld digital device, that sits in your home and allows you to see how much energy you're using and what it's costing you in pounds and pence enabling you to make savings. Both

your smart meter and in-home display will be installed by your energy supplier at no extra cost.

FACT: *Did you know that if we all get a SMART METER we could save enough energy to power every home in Aberdeen, Cardiff and Manchester for 365 days!*

Energy Efficient

Smart meters are paving the way for a more energy efficient future. They make it easier for us to identify the situations where we're using a lot of energy and might want to make changes to reduce it.

Benefits for me

There are plenty of gadgets that can help control energy use, but smart meters have two unique features:

- they show exactly how much energy you're using and what it's costing, in near-real time.
- they send accurate meter readings to your energy supplier, so no more estimated bills or manual meter readings.

With your smart meter, you'll always be able to keep track of exactly how much gas and electricity you're using. This means you can be confident that you're only paying for what you have actually used, and you'll always know what to expect in your next bill. To get one installed, contact your energy supplier to arrange a suitable time.
